Krista Ranby is a Professor in the Department of Psychology at the University of Colorado Denver and head of the Healthy Couples Lab which includes students in the Clinical Health Psychology PhD program and undergraduate student research assistants. She comes to the study of health behavior from the perspective of social and quantitative psychology. She is particularly focused on ways in which close relationship partners affect each other's health. Dr. Ranby is interested in disease prevention through the promotion of physical activity and smoking cessation. Further, she has a particular interest in life transitions (e.g., marriage, pregnancy, disease diagnosis) as a naturally occurring opportunity for behavior change. Her work considers intervention targets for encouraging behavior change within romantic relationships such as joint planning (i.e., collaborative implementation intentions) and consideration of whether partners view each other's health as their responsibility (i.e., partner investment). Finally, Dr. Ranby does dyadic work within several patient populations (e.g., diabetes, bone marrow transplant, cancer, heart disease, sleep and obesity) through collaborations with researchers at the Anschutz medical campus. She currently serves as the Chair of the Department of Psychology and as a Senior Associate Editor for Annals of Behavioral Medicine.
