Noyce Teacher Scholarship Program

UNIVERSITY OF COLORADO **DENVER**

The Language of Inquiry

Take Wonder to the next level! In this course, you will see that literacy is not just “one more thing to teach” but a powerful tool to strengthen your science and mathematics instruction without sacrificing any of the excitement and deep thinking that comes from direct experiential learning. Professional scientists and mathematicians use reading, writing and argumentation to achieve their goals every day.

The face-to-face and on-line coursework focuses on how your students can enrich their learning and sense-making using non-fiction text, scientific writing, graphic literacy, and productive discourse. Have fun as you observe, practice, plan and implement research-based strategies that support all learners.

HYBRID COURSE

MARK YOUR CALENDAR
